The homepage, end to end.

1440px desktop overview · detail frames follow

390px mobile overview

Six sections. One product.

1. Restrained navigation and link-entry hero.
2. Quiet official company proof line.
3. Three-step core product sequence.
4. Audience-informed concept with visible evidence.
5. Brief creator and team relevance.
6. Closing action and verified footer links.

Honest material

Licensed stock stills explain source → crops. Synthetic fixture questions are never attached to the pictured person. “Independent redesign concept” stays in the footer.

Readable detail

This page is an overview only. Following pages preserve desktop and mobile frames at readable scale and annotate the interaction and working feature.

A five-second promise.

AI VIDEO CLIPPING

Turn long videos into standout clips.

Find the moments worth sharing. Turn them into short videos with captions, reframing, and your style.

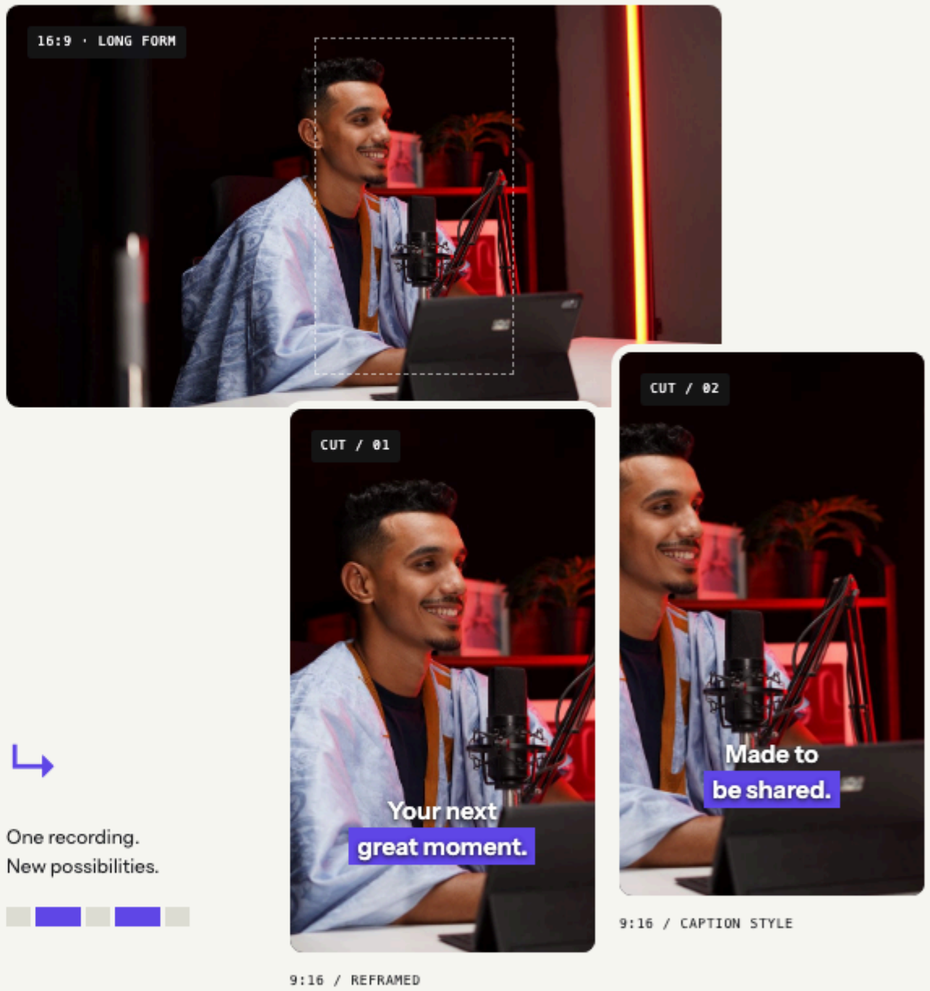

Start with your video

Paste a YouTube video link Find my clips

Try this concept with a public YouTube video.

Explore a sample

01 / THE SOURCE SAMPLE

One recording.
New possibilities.

9:16 / REFRAMED

9:16 / CAPTION STYLE

Sample composition · licensed stock still, not generated output.
Caption layouts are illustrative, not spoken quotations.

Core product first: long videos → standout clips, link entry and two portrait crops. Visible sample labels avoid implying a visitor's output. Official logo proportions are preserved.

An editorial product sequence.

THE OPUSCLIP WORKFLOW

From a long recording to your next post.

Less time on the timeline.
More time creating what comes next.

01

Find the moment

Find compelling moments across your video.

02

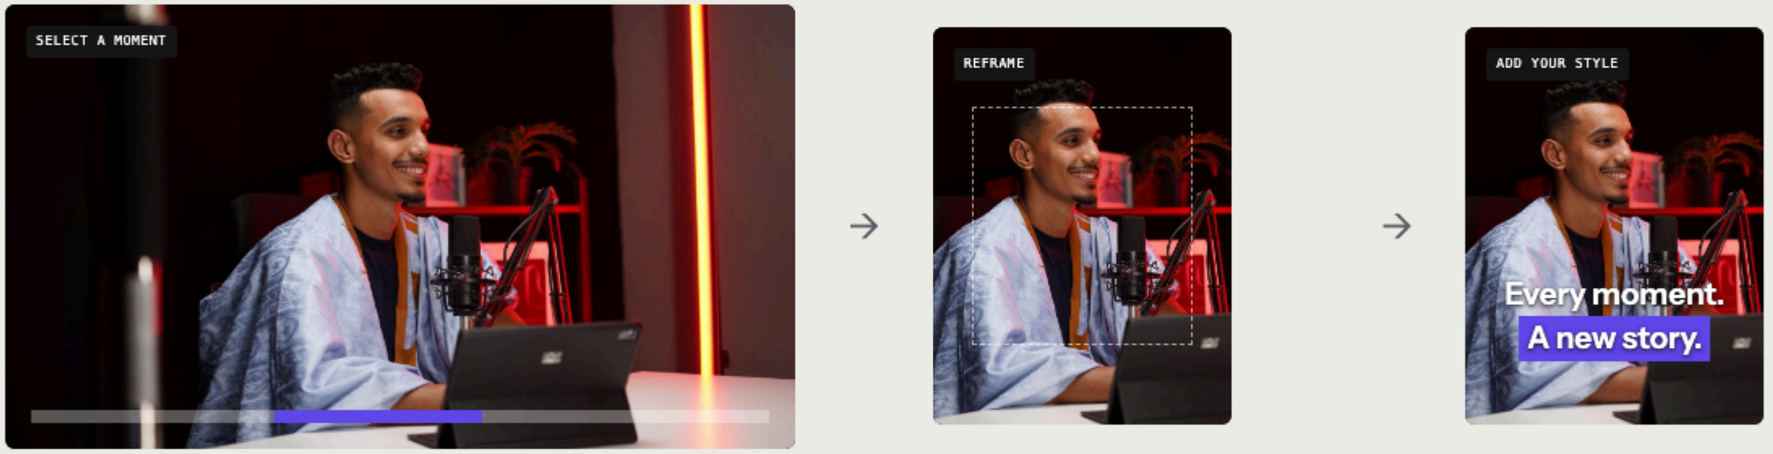

Make it yours

Shape the frame, captions, and visual style.

03

Ready to share

Review your clips and choose what to publish.

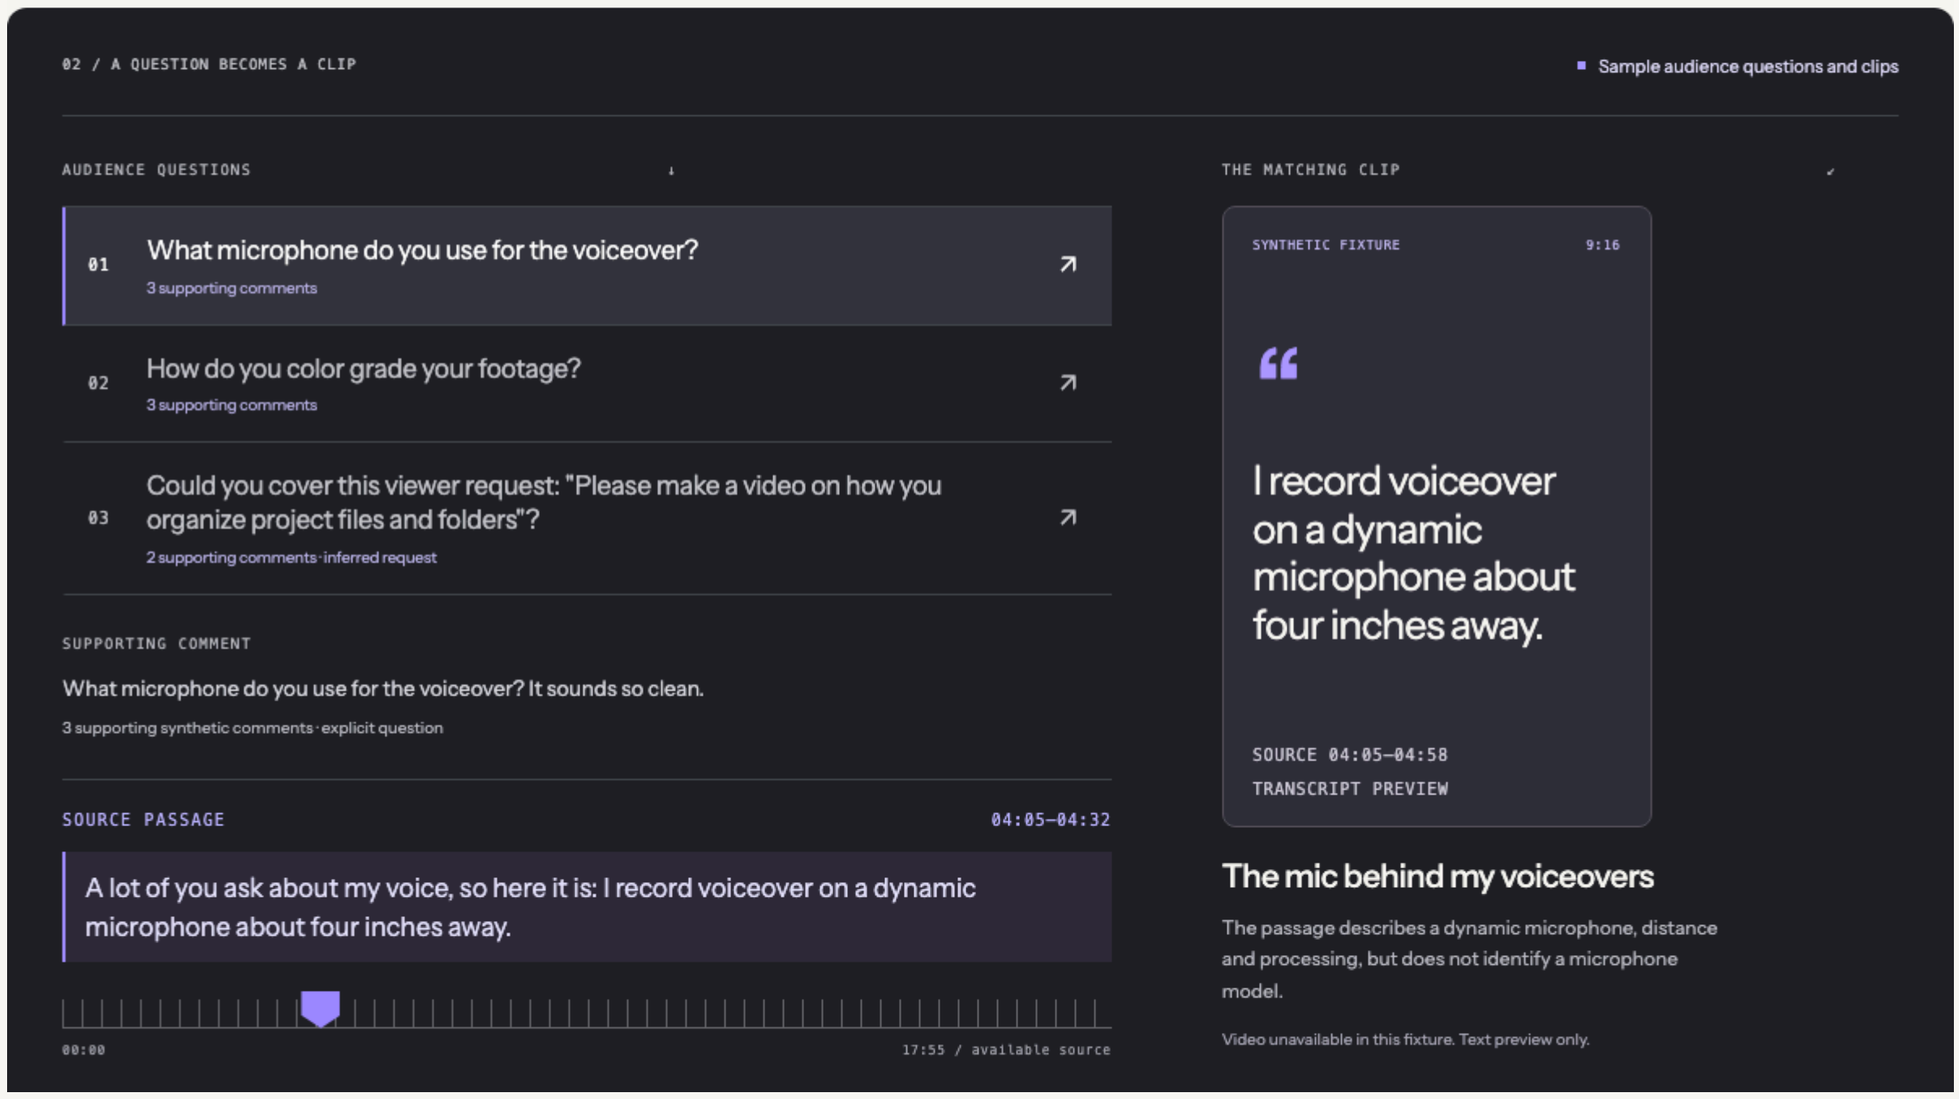

Fine rules and numbered columns replace floating cards. One strip explains selected source, reframing and caption style. Official editing/publishing capabilities are described without exposing unsupported local controls.

Question → passage → clip.

Your audience asks. Your next clip answers.

Find questions in your audience's comments, then discover clips that answer them—with the original comments and video passages beside each recommendation.

Selected / 01

Microphone setup: three synthetic comments connect to the quoted source passage.

A partial answer

The passage describes a dynamic microphone and recording distance, but does not name the model.

Media truth

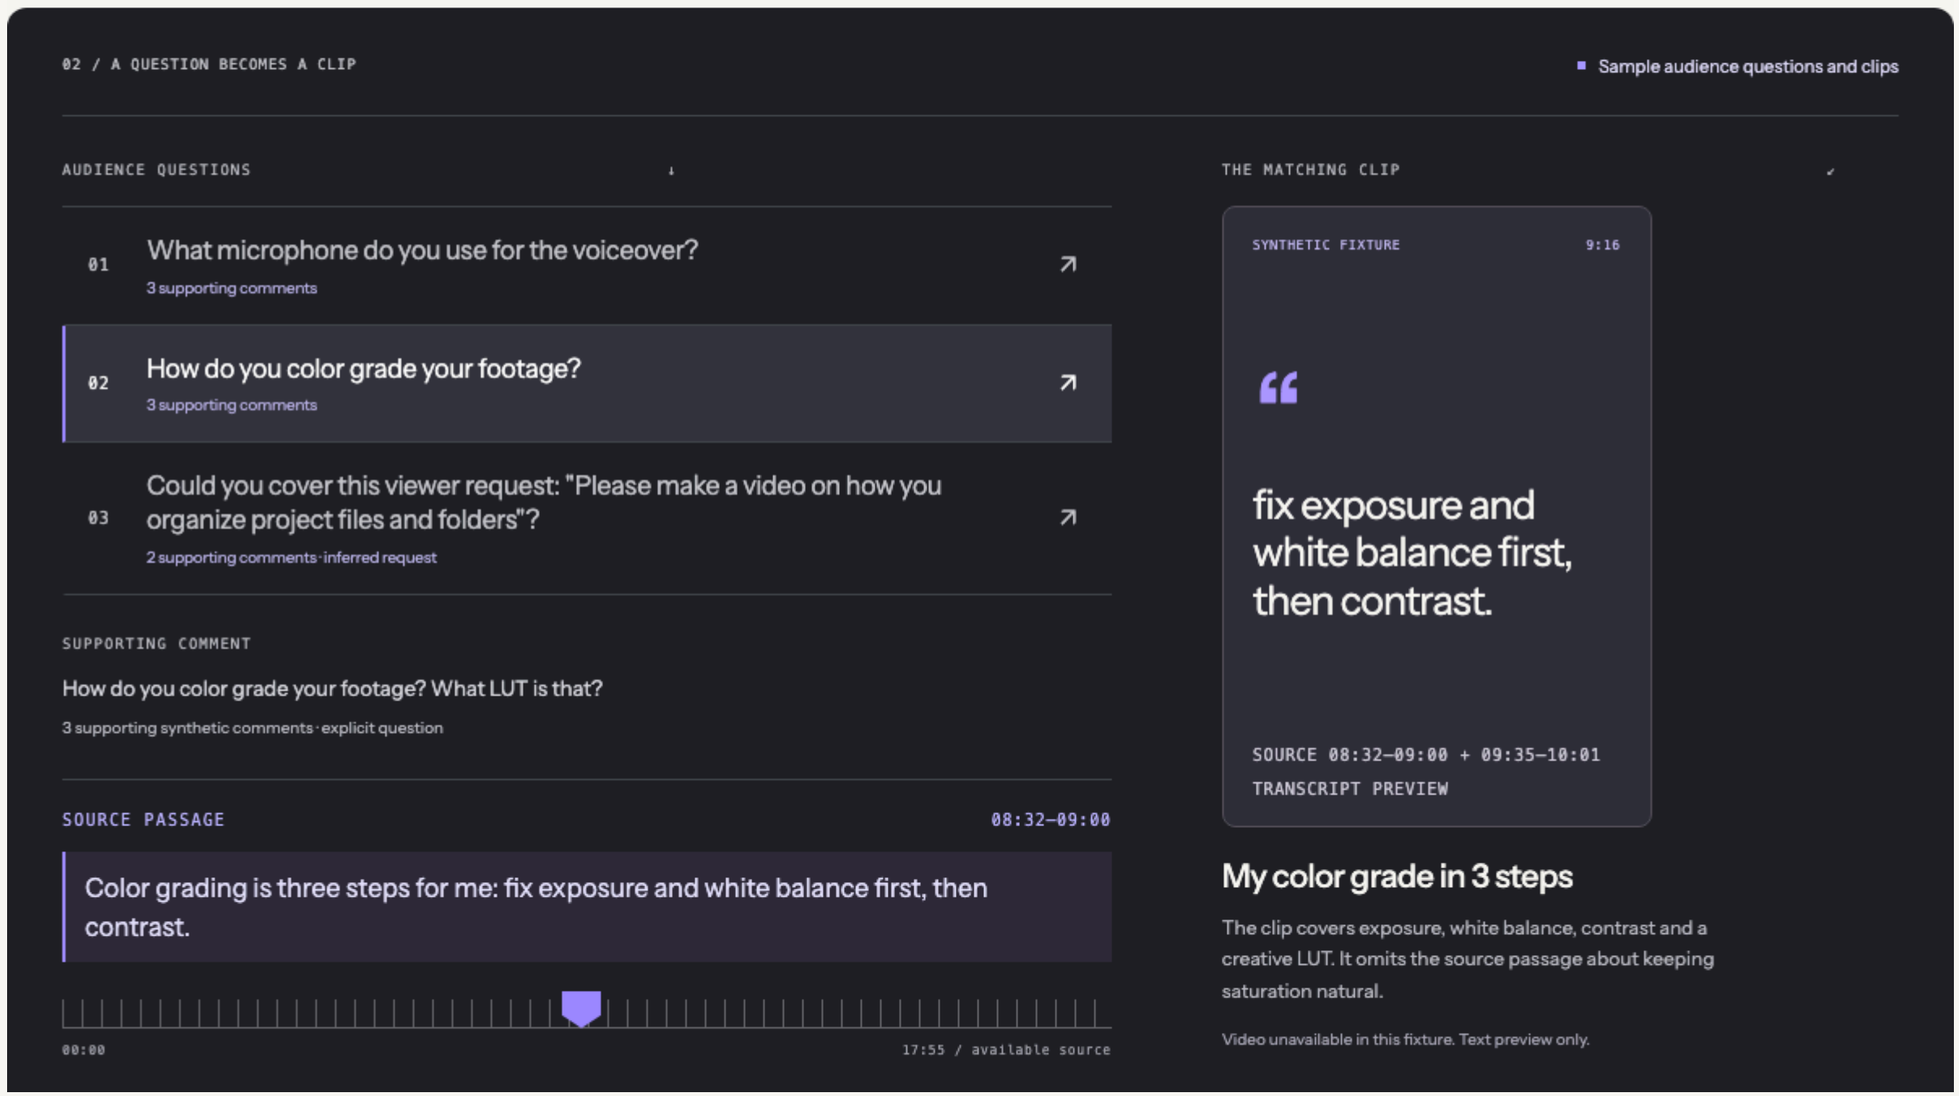

Text preview only. This fixture has no video file.

All comments, counts, quoted words and source times come from the frozen producer fixture. Judgment is a labeled hand-authored marketing storyboard, not an agent result.

Missing context stays in view.

Your audience asks. Your next clip answers.

Find questions in your audience's comments, then discover clips that answer them—with the original comments and video passages beside each recommendation.

Selected / 02

Color grading: the portrait cut contains two noncontiguous source ranges.

A disclosed omission

The saturation step is in the source but not in the selected cut. A partial answer is not promoted to a complete one.

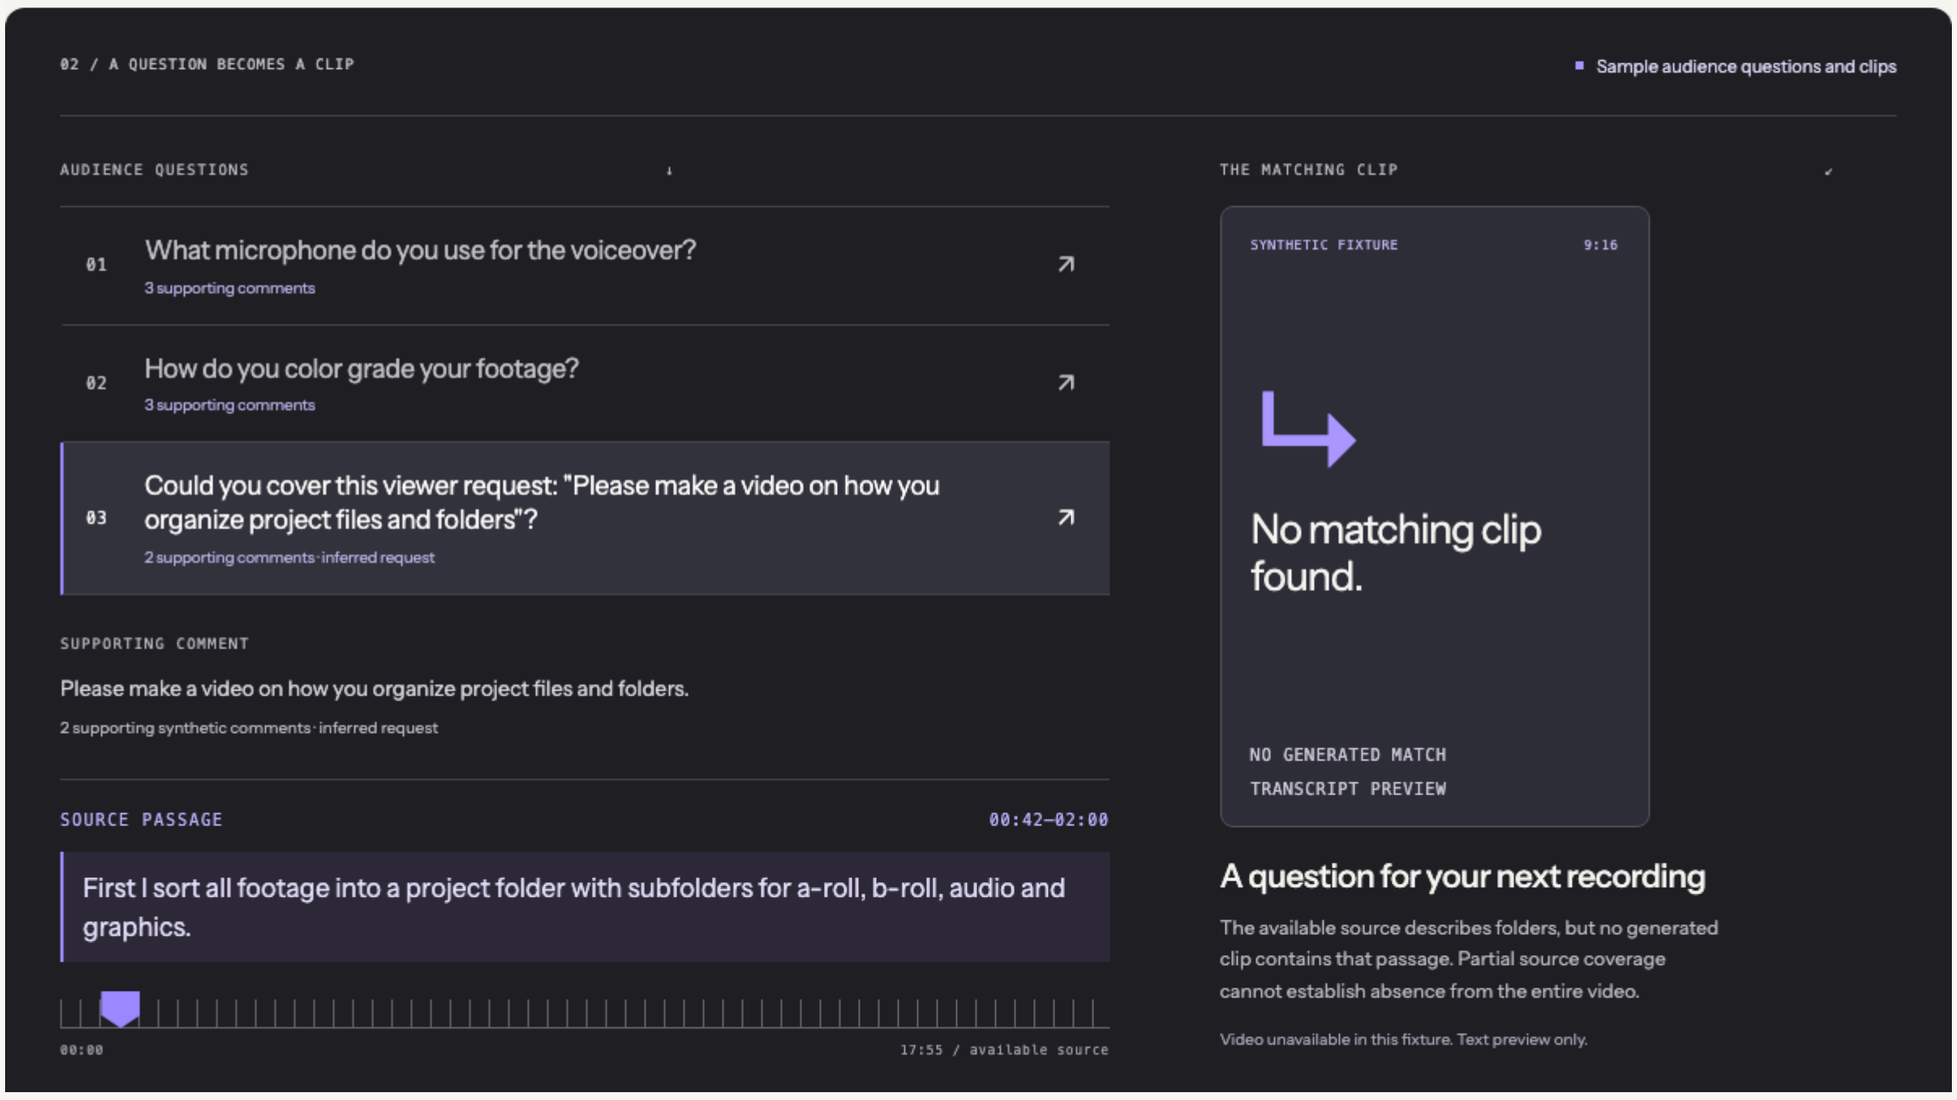

Source time ≠ playback

These are source timecodes; no unsafe edited-clip seeking is attempted.

A useful no-match state.

Your audience asks. Your next clip answers.

Find questions in your audience's comments, then discover clips that answer them—with the original comments and video passages beside each recommendation.

Selected / 03

The folder-organization request is inferred from actual fixture requests, not labeled explicit.

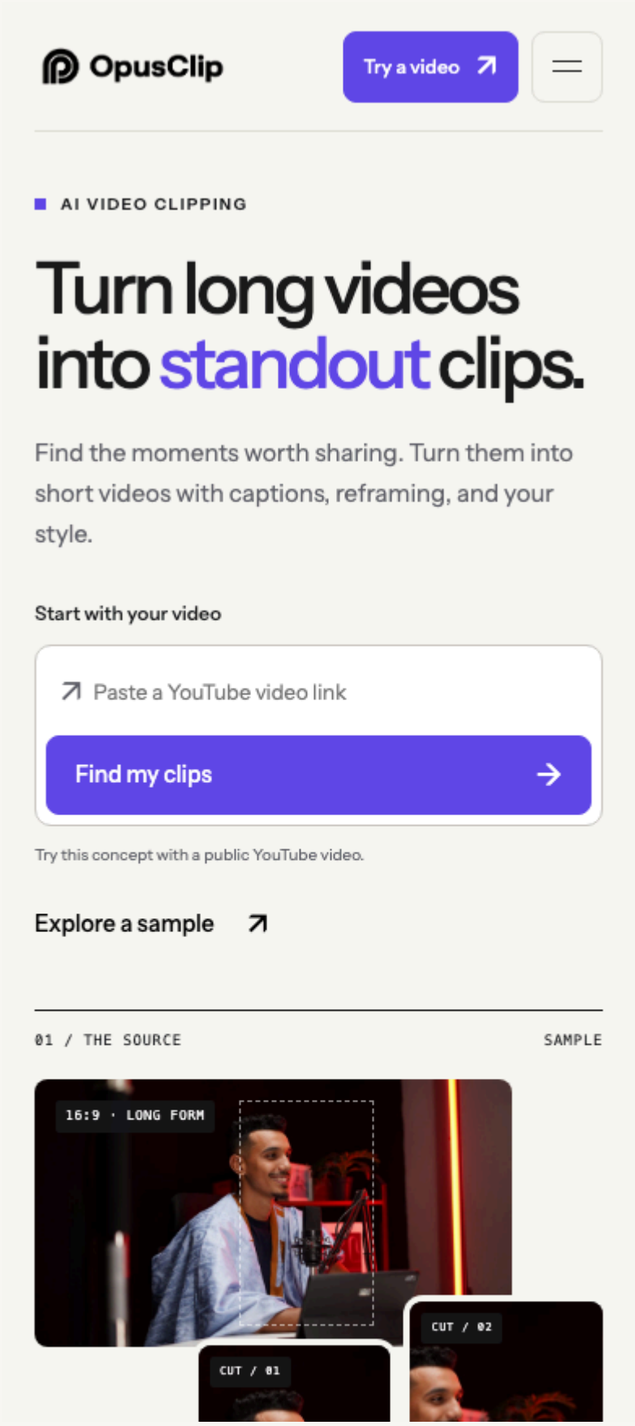

Do not force a clip

The source passage exists, but no generated fixture clip includes it.

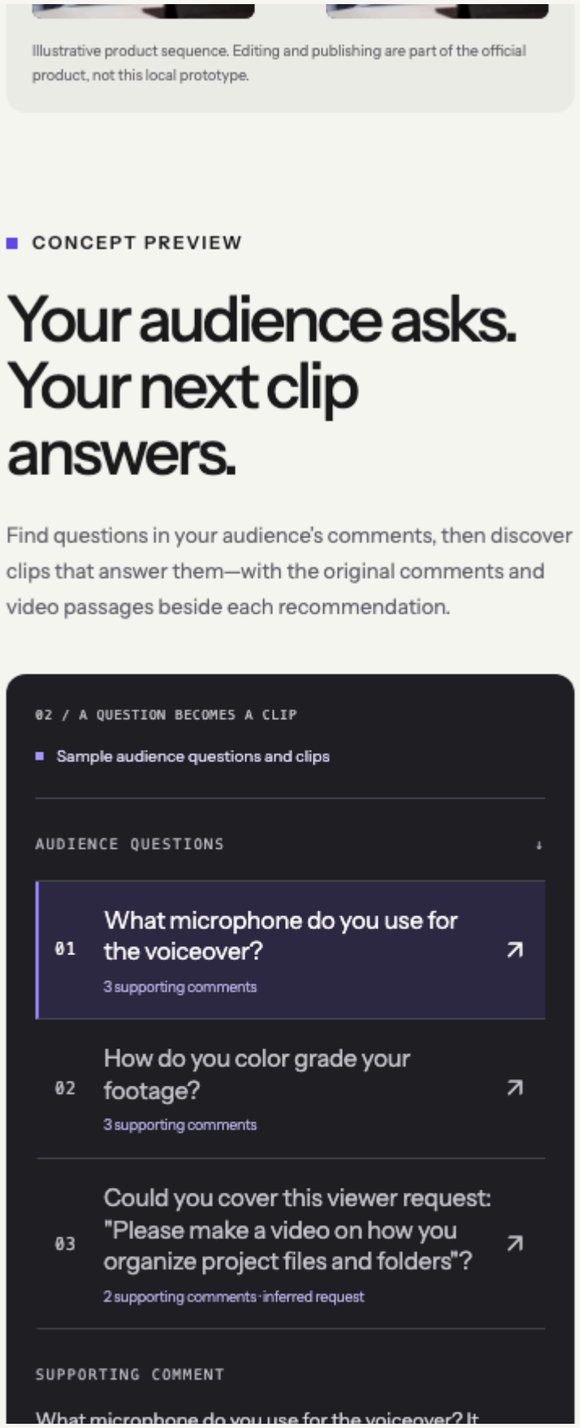

Conservative scope

Partial source coverage cannot establish absence from the complete video.

Mobile recomposes, not shrinks.

390px / hero and source composition

390px / selectable questions and source evidence

Reading order

Promise → input → source/crops. In the concept stage, selectable questions come before the source passage and portrait preview.

Comfortable controls

20px gutters, full-width primary action, native mobile menu, visible focus and at least 44px touch controls.

Same identity

Warm-white spacing and violet actions continue into the workbench. Media dimensions are reserved.

The signature moment / 600ms.

Trigger and state

Tap, click, Enter or Space on a native question button. Update `aria-pressed` and all evidence immediately. No audio autoplay.

0–180ms
Highlight the matching transcript.

180–460ms
Move the source marker over 280ms.

420–600ms
Fade the matching text poster over 180ms.

Fast re-selection

Cancel all previous animations; display the latest evidence. Never block interaction or leave stale quotations.

Reduced motion

Immediate content and marker update, no moving marker or delayed fade. Keep the accessible relationship explanation.

Webflow + optional Rive

Webflow containers and twelve-column grids own the static page. The application module owns source evidence and media. A future Rive asset may animate only the decorative marker.

Semantic boundary

Question controls, original comments, transcript, classifications and explicit playback remain HTML. Evidence is never hidden behind a tooltip or canvas.

Live data boundary

The coordinator persists IDs and snapshots. Research does not generate. Generate is a separate credit-acknowledged action. Retry review never regenerates clips.

Implementation files

public/app.js · public/coordinator-ui.js · src/coordinator-adapter.ts · docs/DESIGN-HANDOFF.md

The same-product workbench.

Real coordinator, synthetic scenario

The integrated fixture runs the two services through the actual HTTP coordinator. The visitor URL stays intact; the fixture's different source is explicitly disclosed.

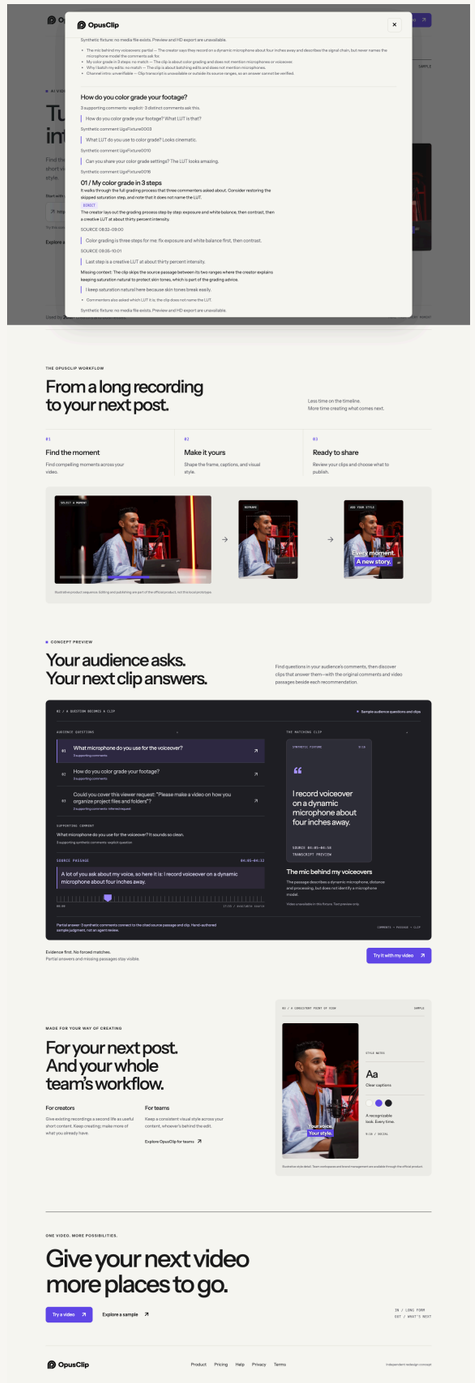

Deliberate Generate

Research reveals questions and supporting comments first. Generate requires a credit-boundary acknowledgment. The fixture spends no credits.

Observed progress

Research, clip processing and review use real coordinator states, not invented percentages.

Reviewed evidence and honest limits.

Complete fixture flow

Research → one synthetic submission → immutable ReviewInput → independent fixture reviewer → reviewed report.

Preserve the hard cases

Four clips retained; one unverifiable. Unanswered folder request and partial source coverage remain visible. Fake media URLs are not downloads.

Refresh and recovery

Refresh observes a saved integration ID. Review and handoff retries keep the existing project. Reconciliation can adopt an existing project; this adapter cannot force a new paid job.

Limitations

No live YouTube retrieval, paid generation or live review verified in this marketing task. Fixture judgments are hand-authored synthetic responses. Team administration and video editing link to the official product.
