One homepage. One coherent product.

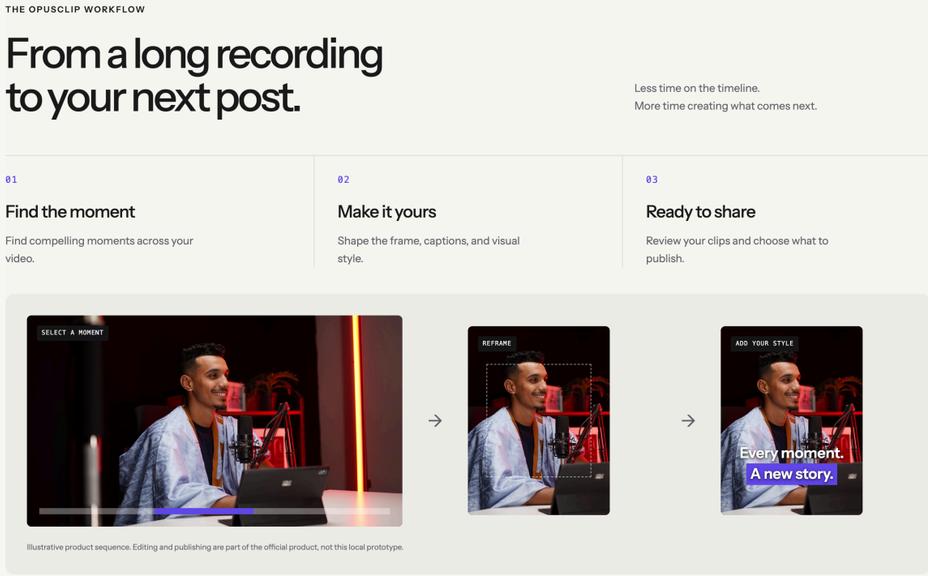

Complete desktop overview, with readable details on the following pages.

1440px desktop · complete page, unaltered proportions

01 / Core promise and link entry

02 / Source → reframed cut → caption treatment

Reading order

01 — Core promise
02 — Product sequence
03 — Audience concept
04 — Creators + teams
05 — Closing + footer

A homepage first.

Approximately 70% core product, 30% audience-informed addition.

Honest material.

The identifiable creator appears only in licensed, labeled stock illustrations. Synthetic comments and passages belong to a separate text-only fixture example.

Show the transformation first.

Turn long videos into standout clips.

Try this concept with a public YouTube video.

Explore a sample

01 / THE SOURCE SAMPLE

One recording.
New possibilities.

9:16 / REFRAMED

9:16 / CAPTION STYLE

Sample composition · licensed stock still, not generated output.
Caption layouts are illustrative, not spoken quotations.

Used by **20M+** creators and businesses.

MORE FROM EVERY MOMENT

01 / Recognizable identity
The official logo anchors the new system.

02 / One starting point
A YouTube link; optional goal in the workbench.

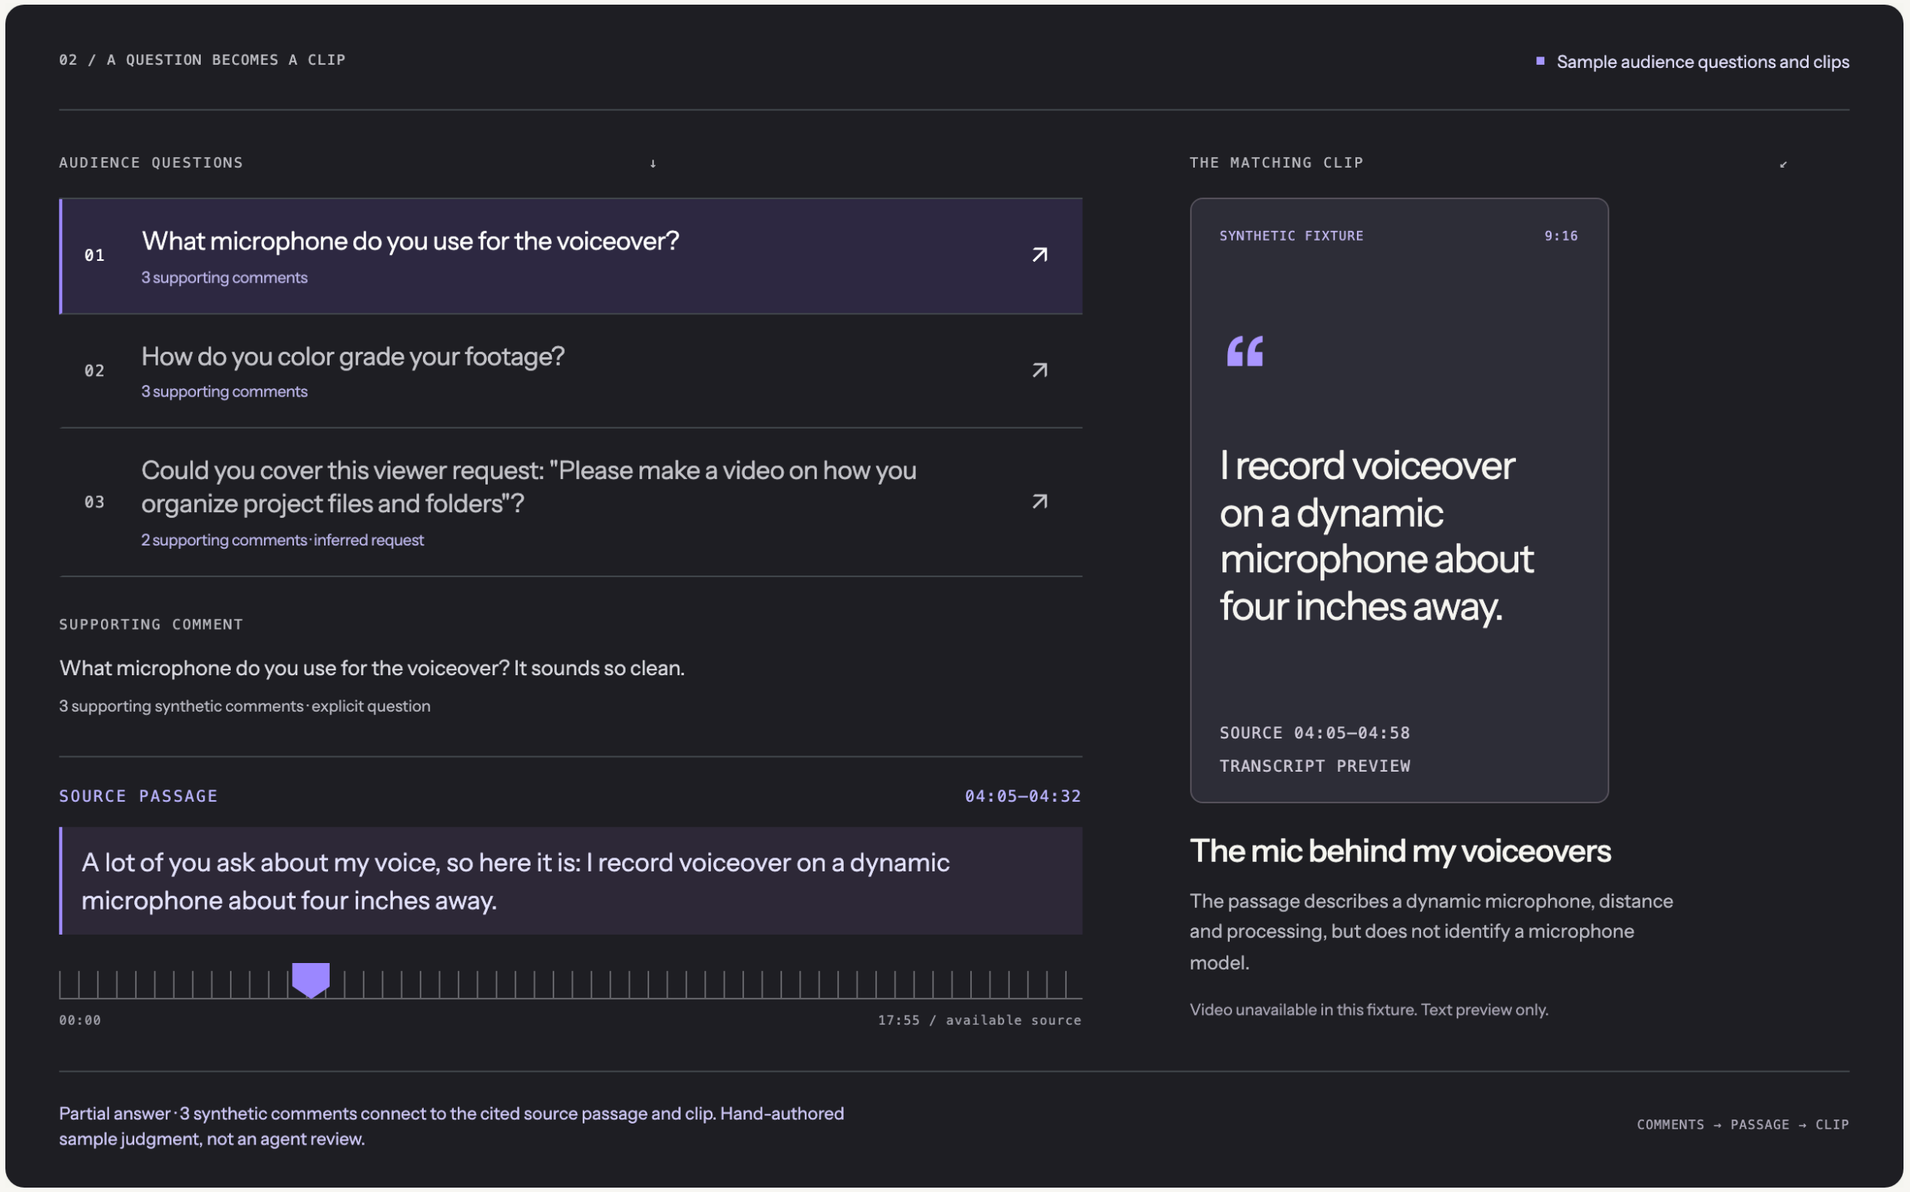

03 / Clear composition
One landscape source, two portrait crops. Labeled stock stills, not generated output.

04 / Deliberate generation
Entry starts research when configured. Paid Generate remains separate.

"Used by 20M+ creators and businesses" is an official OpusClip claim, not concept adoption. The sample action never requires a live processing job.

Your audience asks. Your next clip answers.

Keep the question, source passage and candidate clip visible together.

SAMPLE AUDIENCE QUESTIONS AND CLIPS · SYNTHETIC FIXTURE · HAND-AUTHORED MARKETING JUDGMENT

01 / Audience evidence

Three fixture comments support the microphone question. Counts and wording come from the saved fixture, not a real audience.

02 / Source passage

04:05–04:32 describes a dynamic microphone and recording distance.

03 / Candidate clip

The broader 04:05–04:58 clip contains that passage. The answer is partial: the model is not named.

Evidence, not prediction.

A question in a generation brief is not proof of an answer. No-match and unverifiable outcomes remain visible.

> The portrait is a transcript preview. No synthetic fixture media file exists; nothing plays automatically, and no fixture URL is offered as an HD download.

Research first. Generate deliberately.

The two agents retain distinct responsibilities; ordinary application code coordinates them.

VIDEO LINK → RESEARCH → ACKNOWLEDGED GENERATE → CLIP PROCESSING → INDEPENDENT REVIEW

01 / Actual integrated research output

What microphone do you use for the voiceover?

3 supporting comments · explicit · 3 distinct comments ask this.

> What microphone do you use for the voiceover? It sounds so clean.

Synthetic comment UgxFixture0001

> Which microphone is that? Your voiceover audio is crazy good

Synthetic comment UgxFixture0005

> Mic question: what microphone gives your voiceover that warm sound?

Synthetic comment UgxFixture0013

02 / Actual Generate boundary

☐ I understand that live Generate consumes OpusClip credits. This integrated fixture uses synthetic clips and spends no credits.

Generate fixture clips →

Fixture mode: no OpusClip account is used and no credits are consumed.

Coordinated synthetic run. The fixture spends no credits. Research evidence is reviewed before Generate.

Current capture limitation

The connected run reached generation, but review failed because its packet had no matching bound synthetic response. No live-model fallback or live success is claimed.

03 / Completed offline sample — not agent output

What microphone do you use for the voiceover?

PARTIAL

> What microphone do you use for the voiceover? It sounds so clean.

Synthetic comment UgxFixture0001 · 2026-09-20

> Which microphone is that? Your voiceover audio is crazy good

Synthetic comment UgxFixture0005 · 2026-09-20

> Mic question: what microphone gives your voiceover that warm sound?

Synthetic comment UgxFixture0013 · 2026-09-12

The mic behind my voiceovers

The passage describes a dynamic microphone, distance and processing, but does not identify a microphone model.

SOURCE 04:05–04:32

> A lot of you ask about my voice, so here it is: I record voiceover on a dynamic microphone about four inches away.

SOURCE 04:32–04:58

> It goes into a simple audio interface, and I add light compression and a high-pass filter in the edit.

- The exact microphone model is not named in the available passage.

Video preview unavailable in this synthetic fixture. No generated media is represented.

HD video export unavailable. Fixture URLs are not download links.

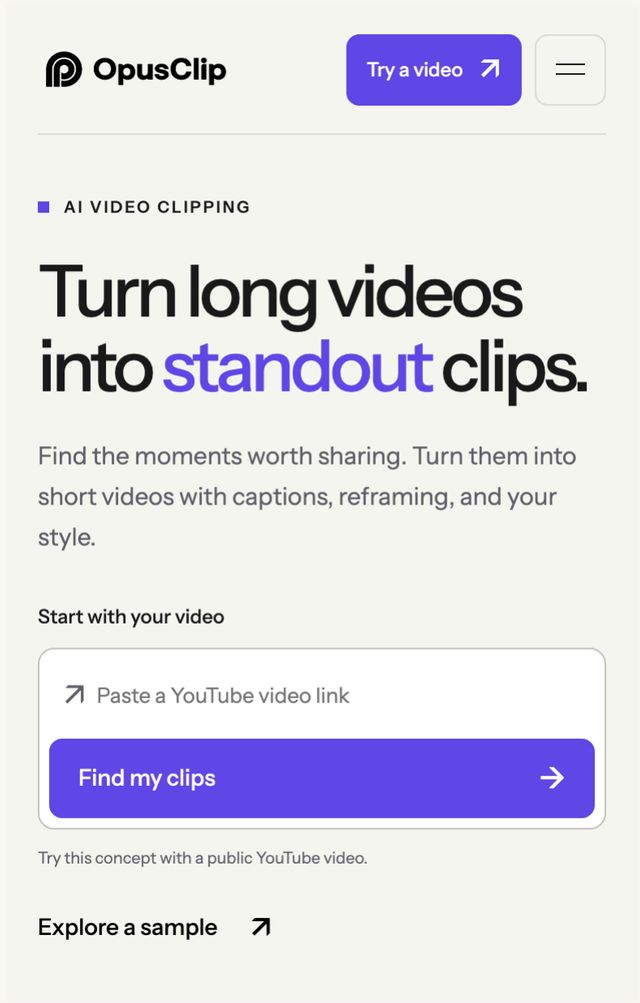

HAND-AUTHORED OFFLINE STORYBOARD · EXACT SYNTHETIC COMMENTS AND PASSAGES

The sample shows a partial answer with source times and caveats. It illustrates the implemented result UI, not a successful independent review of the connected run.

Persisted IDs make refresh observe existing work. Retry review/handoff and project reconciliation retain ownership. This adapter never forces a new paid project. Incomplete evidence and unavailable media remain explicit.

The same hierarchy, recomposed.

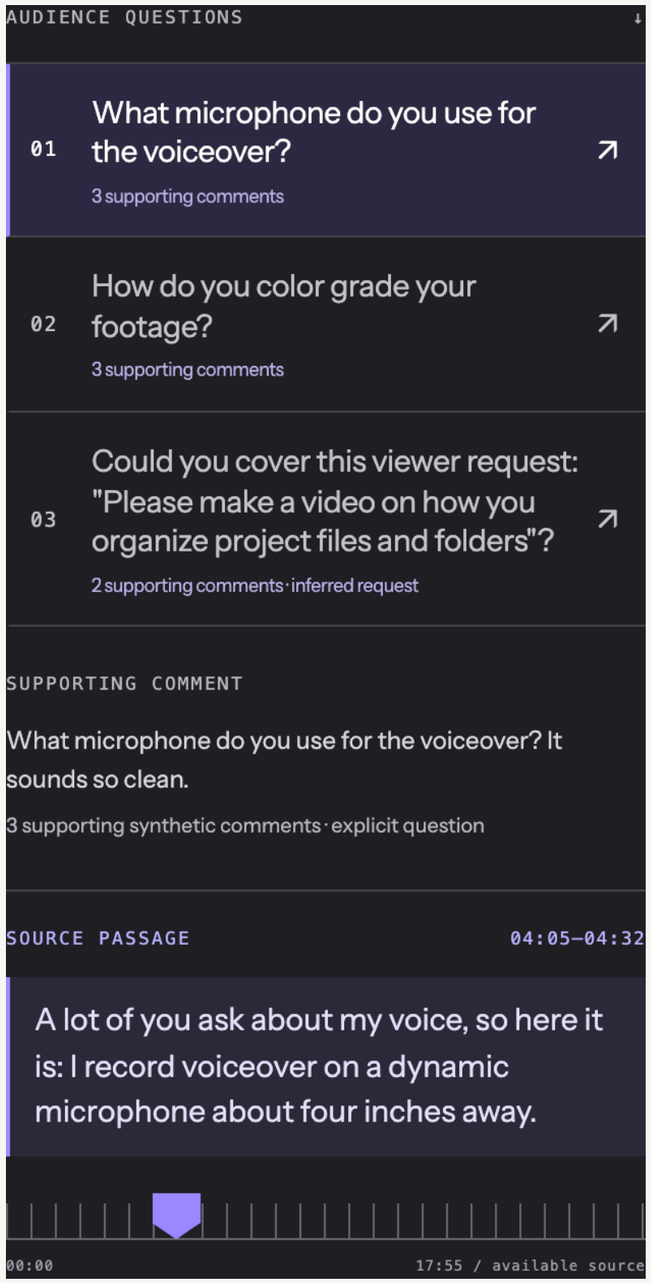

390px viewport · native mobile reading order, not a scaled-down desktop screenshot.

01 / Promise, link input and full-width primary action

Small screen, clear starting point.

20px gutters, compact disclosure navigation, visible focus and controls designed for at least 44px touch targets. Media follows the copy.

02 / SYNTHETIC QUESTIONS → COMMENT → SOURCE

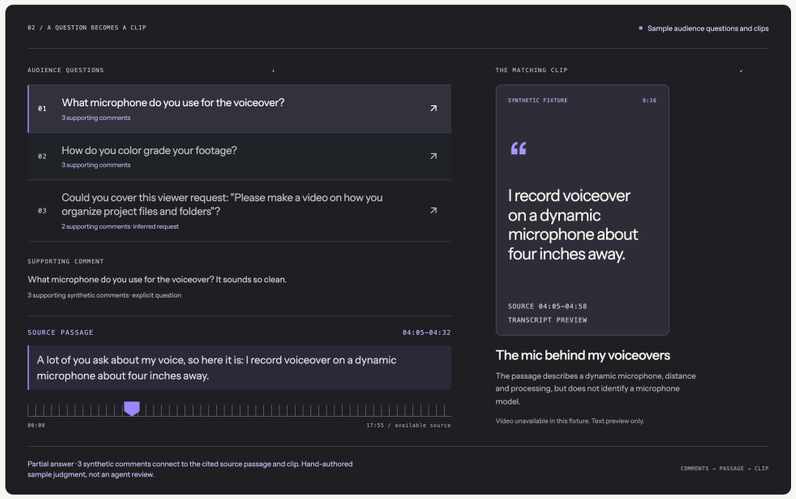

03 / SYNTHETIC TEXT PREVIEW → CAVEAT

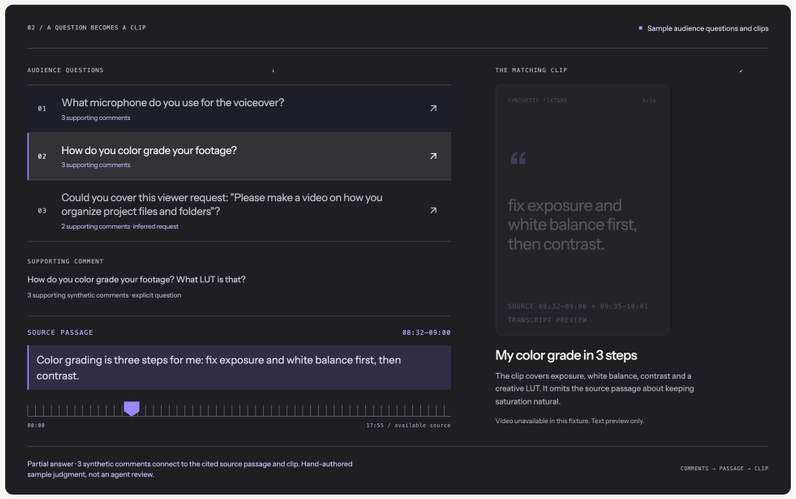

Question selection never starts audio. Available video loads explicitly and pauses when its workbench closes. Evidence stays in reading order, not behind tooltips.

Select a question. See the connection.

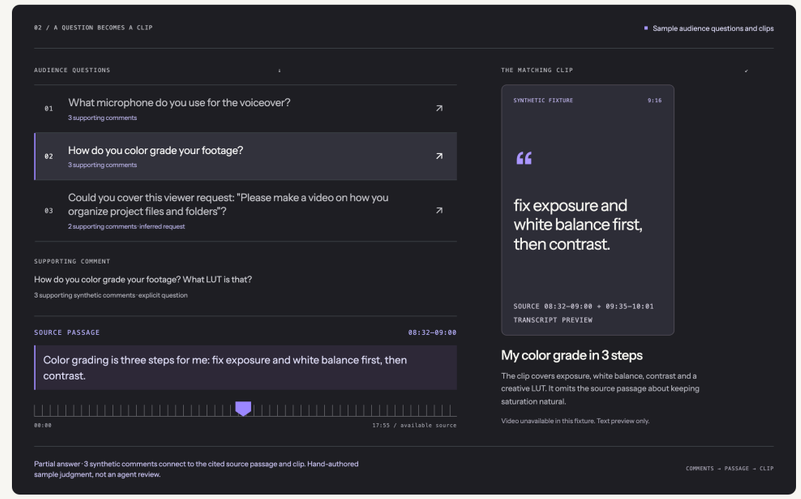

Actual transition frames from one identical viewport and crop; synthetic sample.

01 / Before
Microphone question selected.

02 / 100ms
Color question selected; transcript highlighted. Animation paused only for capture.

03 / 600ms
Color poster settled; passage and missing-context explanation remain visible.

State	Implemented trigger / behavior	Time
Selection	Click, tap, Enter or Space. Native `aria-pressed` and all evidence update immediately.	0ms
Evidence	Transcript highlight resolves into the selected evidence treatment.	0–180ms
Source	Marker moves to the relevant source moment; source times are not playback times.	180–460ms / 280ms
Result	Matching poster fades from 25% to full opacity; interaction is never locked.	420–600ms / 180ms

Interruptible. New selection cancels prior animations. The latest evidence replaces the old content immediately.

Reduced motion. Instant content and marker update; no moving marker or delayed fade. A polite text explanation carries the same meaning.

Explicit playback. No audio autoplay. Controls and evidence remain semantic HTML; optional Rive would own only the decorative marker.

A small system. A practical build.

Clean crops of implemented components, shared from marketing into the workbench.

1200px maximum container · twelve-column desktop grid · 20px mobile gutters · approximately 8px controls / 12px panels · sparse monospace timecodes

MEDIA FRAME / 9:16
Licensed stock still, illustrative captions.

Webflow

Static sections use standard containers, grids, reusable typography, buttons, steps and media frames.

Application module

Workbench owns coordinator requests, saved-run observation, evidence, media and recovery controls.

Optional Rive

Future source-marker motion only. No native Rive or Webflow source file is claimed.

Practical delivery

Self-hosted fonts, reserved dimensions, poster-first media, explicit video loading and reduced-motion behavior.

Independent redesign concept. Broader editing, publishing and team administration link to the official product. No performance uplift or live end-to-end success is claimed. OpusClip homepage · Official media kit · Licensed Pexels stock still.
